

Insurance Exam Prep - Supplemental Study Guide

This study guide is designed to support your study of the pre-licensing exam prep course. It is not a replacement for the textbook but is a supplemental tool you can use to record your study notes for later review.

The guide follows the textbook table of contents, with a separate section for each course lesson. Besides providing space to write your lesson notes, each lesson in this guide includes the following features:

- An introductory paragraph summarizing each lesson's main topic
- An outline of key test points covered in the lesson
- Reinforcement questions that challenge you to write, in your own words, essential points drawn from the lesson
 - The reinforcement questions are readily answerable from the lesson content
 - The appendix at the back of the study guide presents suggested answers

For best results, make this guide an active part of your pre-licensing course studies. Writing down key lesson points will help you better retain them in your memory. Let the reinforcement questions serve as a way to organize your lesson notes. Use the Lesson Notes section to write any other points you want to review later.
